

EMILIANO TONATIUH PADILLA ROBLES

Full Stack Developer

Puerto Vallarta, Jalisco, Mexico | emilianopadillarobles@gmail.com | +52 5569156361
GitHub: github.com/EmilianoPadilla | LinkedIn: [linkedin.com/in/emiliano-padilla-robles](https://www.linkedin.com/in/emiliano-padilla-robles)
Spanish (Native) | English (Fluent) | French (Intermediate)

PROFESSIONAL SUMMARY

Full Stack Developer with a strong backend foundation in Python, FastAPI, PostgreSQL, SQLAlchemy, Docker, JWT authentication, and automated testing. Built and deployed Obolus, a full stack e-commerce marketplace with React, TypeScript, Tailwind CSS, TanStack Query, and Zustand. Strong understanding of distributed systems design including load balancing, caching, message queues, and scalability patterns. Background in technical support, data analysis, scientific research, and education.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL

Frontend: React, React Router, TypeScript, Tailwind CSS, shadcn/ui, TanStack Query, Zustand, React Hook Form, Zod, HTML, CSS, JavaScript

Backend: FastAPI, REST APIs, SQLAlchemy ORM, Pydantic

Authentication: JWT, OAuth2, Password Hashing (bcrypt)

Databases: PostgreSQL, Supabase, Relational Database Design, Transactions

System Design: Distributed systems, Redis caching, Kafka message queues, load balancing, horizontal scaling, fault tolerance, incident response

Testing: Pytest, Postman, Swagger/OpenAPI

DevOps & Deployment: Docker, Docker Compose, Render, Vercel, Linux, Environment Variables, Git, GitHub

PROJECTS

Obolus — Full Stack E-Commerce Marketplace | *React, TypeScript, FastAPI, PostgreSQL, Supabase, TanStack Query, Zustand, Tailwind CSS, shadcn/ui, JWT*

- Built and deployed a complete full stack e-commerce marketplace — live at obolus-by-emilianopadilla.vercel.app.
- Frontend built with React and TypeScript featuring product browsing, real-time search, category filtering, cart management, and JWT authentication flow.
- Backend built with FastAPI and PostgreSQL (Supabase) with full CRUD, JWT authentication, OAuth2, and ownership-based authorization.
- Implemented seller functionality — any authenticated user can list, edit, and delete their own products.
- Cart system persisted in the database with optimistic updates for instant UI feedback.
- Styled with Tailwind CSS and shadcn/ui following mobile-first responsive design principles.
- Deployed frontend on Vercel and backend on Render with Supabase PostgreSQL database.

E-Commerce REST API | *Python, FastAPI, PostgreSQL, SQLAlchemy, Docker, JWT, OAuth2, Pytest*

- Built and deployed a production-style RESTful API for an e-commerce platform.
- Designed normalized relational database models for users, products, categories, orders, and order items using SQLAlchemy ORM.
- Implemented complete authentication system with JWT tokens, OAuth2 authorization flow, and bcrypt password hashing.
- Developed full CRUD endpoints with transaction management, input validation via Pydantic, and business logic enforcement.
- Containerized with Docker and Docker Compose; deployed to Render with live PostgreSQL database.
- Created automated API tests using Pytest and documented endpoints through Swagger/OpenAPI.

Movie Browser | *React, TypeScript, TanStack Query, React Router, Tailwind CSS, React Hook Form, Zod*

- Built a multi-page movie search application consuming the OMDb REST API with real-time debounced search.
- Implemented infinite scroll pagination using TanStack Query's useInfiniteQuery hook.
- Built custom hooks: useDebounce, useLocalStorage, useMediaQuery for reusable logic across components.
- Applied Tailwind CSS for fully responsive design with mobile-first breakpoints and collapsible mobile navbar.

School Management API | *Python, FastAPI, PostgreSQL, SQLAlchemy*

- Designed and developed a modular RESTful API with separate routers for students, teachers, and events.
- Implemented CRUD operations, pagination, input validation, error handling, and environment-based configuration.

PROFESSIONAL EXPERIENCE

Teacher — José Joaquín Fernández de Lizardi (2023–2025)

- Taught Geography, Biology, and English to high school students.
- Developed strong communication, mentoring, and problem-solving skills managing classrooms of 30+ students.

Technical Support Specialist — Pandora (2021–2023)

- Provided technical support and troubleshooting for users via live chat and email for a US-based media platform.
- Coordinated team-wide incident response when a platform bug caused thousands of simultaneous user contacts — resolved in 2 days vs estimated 4-5.
- Performed QA monitoring, issue tracking through JIRA, and helped onboard new team members during high-volume periods.

Biologist — Vallarta Botanical Gardens (2020–2021)

- Managed environmental databases, research projects, technical documentation, and scientific data collection.

Environmental Technician — National Commission of Protected Natural Areas (2019–2020)

- Maintained technical records and environmental datasets.

EDUCATION

Bachelor of Science in Earth Sciences (Water Sciences Orientation)

National Autonomous University of Mexico (UNAM) | 2014 – 2019
